

QuantifEYE[®]

Qualitative Understanding and Nutritional Treatment Intervention for the EYE

To Our Patients,

We continuously strive to provide our patients the very best in eye care services. Recently, we acquired a device that allows us to assess your risk of developing an eye disease called Macular Degeneration. This disease is a leading cause of blindness in adults and there is no adequate treatment; however, it may be managed if caught early. We can now take measures to reduce your risk of developing this disease. The test is a light response test that only takes a few minutes.

Risk Factors *(please check all that apply)*

- Age: _____
- Family History of: Macular Degeneration, Glaucoma, Cataract, High Blood Pressure, Diabetes, Heart Disease
- Smoker (even if you have quit)
- If You have: Glaucoma, Cataract, High Blood Pressure, Diabetes, Heart Disease
- Sensitive to light
- Excessive exposure to the sun
- Female
- Light eyes, light skin
- Inadequate consumption of green, leafy vegetables

We strongly recommend that you take this test so we can assess your risk for Macular Degeneration, and develop a base-line measurement that allows us to track any changes that might occur in the future. Since this is a new test, never before available, it is not covered by your insurance; however, the cost to you is a minimal charge of \$20.00.
